

WHAT TOOLS DO I NEED TO INSTALL FLOORING?

At right, find the type of flooring you're installing, and use the checklist to make sure you have the tools you need to get the job done.

You should also always have proper safety protection, including glasses, gloves and kneepads.

Don't forget:

Before any floor is installed, proper flooring prep must be done to ensure a good-looking and long-lasting result.

Getting the old flooring up, whatever it is / was, is an important part of the prep. Whether carpeting, linoleum or something else, get the lumps, bumps, adhesive, tack strips, etc. up and smooth before you start to lay anything. This includes fixing floor creaks (often loose floorboard nails) and ensuring your subfloor is level.

If your home is built on a slab, cracks need to be filled and stabilized, lumps removed, divots filled, etc.

Baseboard and / or shoe molding is often a part of adding a finished look to new flooring. Listed tools do not include those needed for prep work or baseboard / shoe molding. You'll also need equipment to clean up your mess – a dust pan, shop vacuum and a broom should do the job.

Tools Needed by Flooring Type

Vinyl & Linoleum

- Adhesive trowel
- Flat bar
- Straight edge
- Floor roller
- Floor scraper
- Level
- Chalk line
- Utility knife / linoleum knife
- Tape measure
